1.1.1: The Institution ensures effective curriculum planning and delivery through a well-planned and documented process including Academic calendar and conduct of continuous internal Assessment

ICT Based Class

SHOT ON REDMI 7
AI DUAL CAMERA

- Spectroscopy is an instrumentally aided studies of the interactions between matter (sample being analyzed) and energy (any portion of the electromagnetic spectrum, EMS)

- EMS refers to the seemingly diverse collection of radiant energy, from cosmic rays to X-rays to visible light to microwaves, each of which can be considered as a wave or particle traveling at the speed of light.

- Chemists use portions of the EMS to select and analyze the energies contained within a sample to uncover detailed evidence of its composition and bonding.
